

Component *Library*

Nine primitives that compose every screen — buttons, inputs, cards, badges, checkboxes, sheets, empty states, skeletons, toasts. Each rendered live in light + dark, with all states and the in-store one-handed variants.

01 Button 4 variants × 3 sizes × 4 states

— PRIMARY ACTION SURFACE

The button is the system's most-touched primitive. Pressed darkens the fill 10%, disabled drops opacity to 40%, loading swaps the label for a spinner while keeping width fixed (no layout shift). Icon-only square variants honor the 44pt minimum tap area regardless of size token.

SIZES - sm — 36 pt · 13 pt · pad 12/16 - md — 44 pt · 15 pt · pad 14/20 - lg — 50 pt · 17 pt · pad 16/24	VARIANTS - primary — bg primary, fg #FFF - secondary — bg #F1F5F9, fg #0F172A - ghost — transparent, fg primary - destructive — bg #EF4444, fg #FFF	STATES - pressed — fill ×0.9 (10% darker) - disabled — opacity 0.4, no haptic - loading — spinner, label hidden, width locked - Press animation: 80 ms scale 0.97 ease-out

Label sits above the field — never floating, never inside — so it stays readable when the keyboard is up and the field is short. Currency uses a right-aligned `Ft` suffix; search uses leading magnifier + trailing clear when there's a value. Focus animates the border to primary in 120 ms.

ANATOMY - Label — body-sm 13pt · #475569 - Field — h 44 pt · radius 10 pt - Helper — body-sm 13pt · #64748B - Error — body-sm 13pt · #EF4444	BORDER COLORS <code>default</code> — #E2E8F0 / dark #334155 <code>focused</code> — #2563EB · 1.5 px · 120 ms <code>error</code> — #EF4444 · 1.5 px <code>disabled</code> — #E2E8F0 + bg #F8F AFC	KEYBOARD HINTS <code>text</code> — default <code>number</code> — numeric pad <code>currency</code> — numeric, suffix "Ft" <code>search</code> — search return key

03Card

simple + swipeable

— CONTAINER

The standard card composes `CardHeader` + `CardContent` + optional `CardFooter` with a hairline rule. Swipeable cards reveal an action lane on either side: left-swipe destructive (red), right-swipe edit (blue). At 65% screen width, the swipe threshold triggers and the card snaps fully open with haptic feedback.

Two badge families. Category badges use the 5 pastel-300 tints from Foundations on slate-900 ink — same color carries across cards, list rows, and shop mode for instant recognition. Price-change badges combine arrow + percentage + optional Ft delta; up=red, down=green (Hungarian conventions match Western markets).

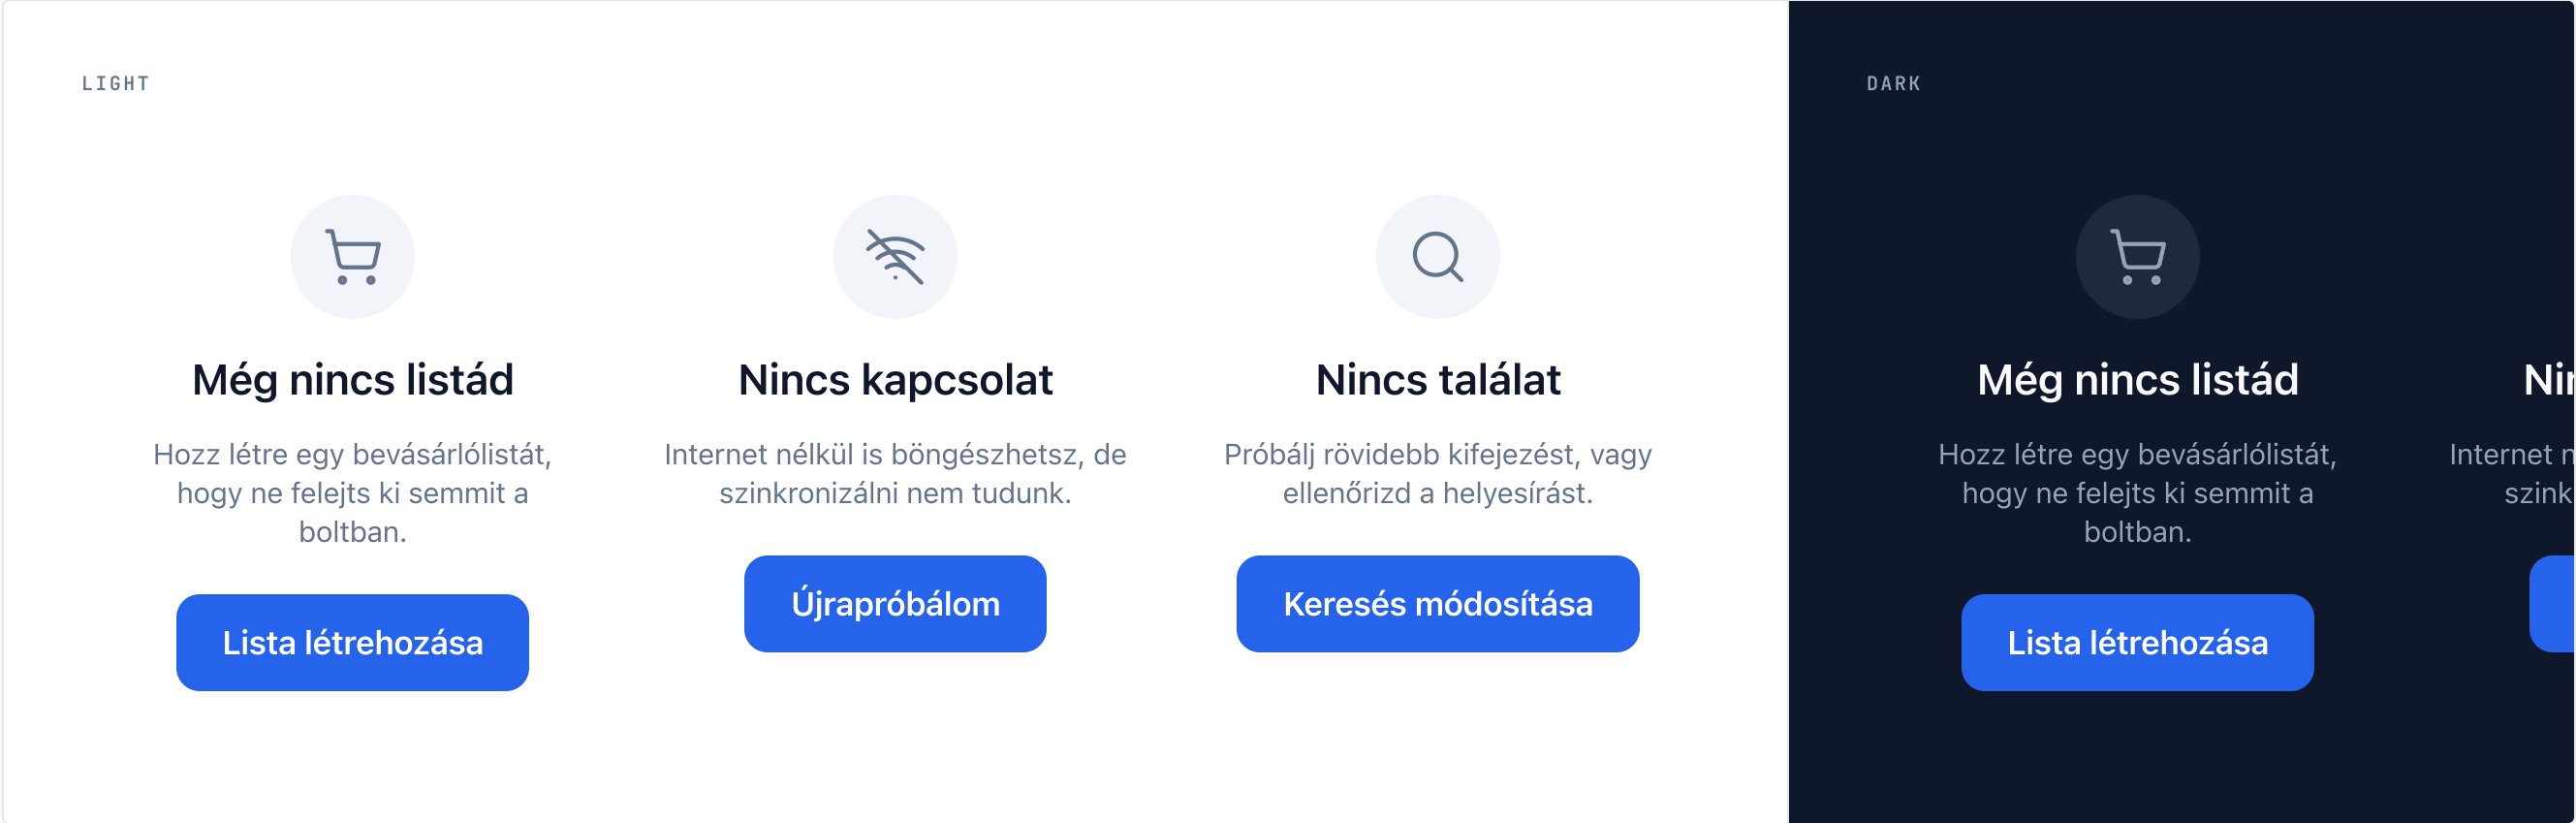

Two sizes for two contexts. The 24 pt list checkbox is hairline-bordered when empty, fills with primary blue and a white check when selected; the parent label strikes through and dims to muted. The 56 pt bolt-mode variant goes full-fill (no border state) — at arm's length you read shape, not stroke. Toggle animation: 150 ms ease-out for list, 220 ms spring with 1.08 overshoot for bolt + medium haptic.

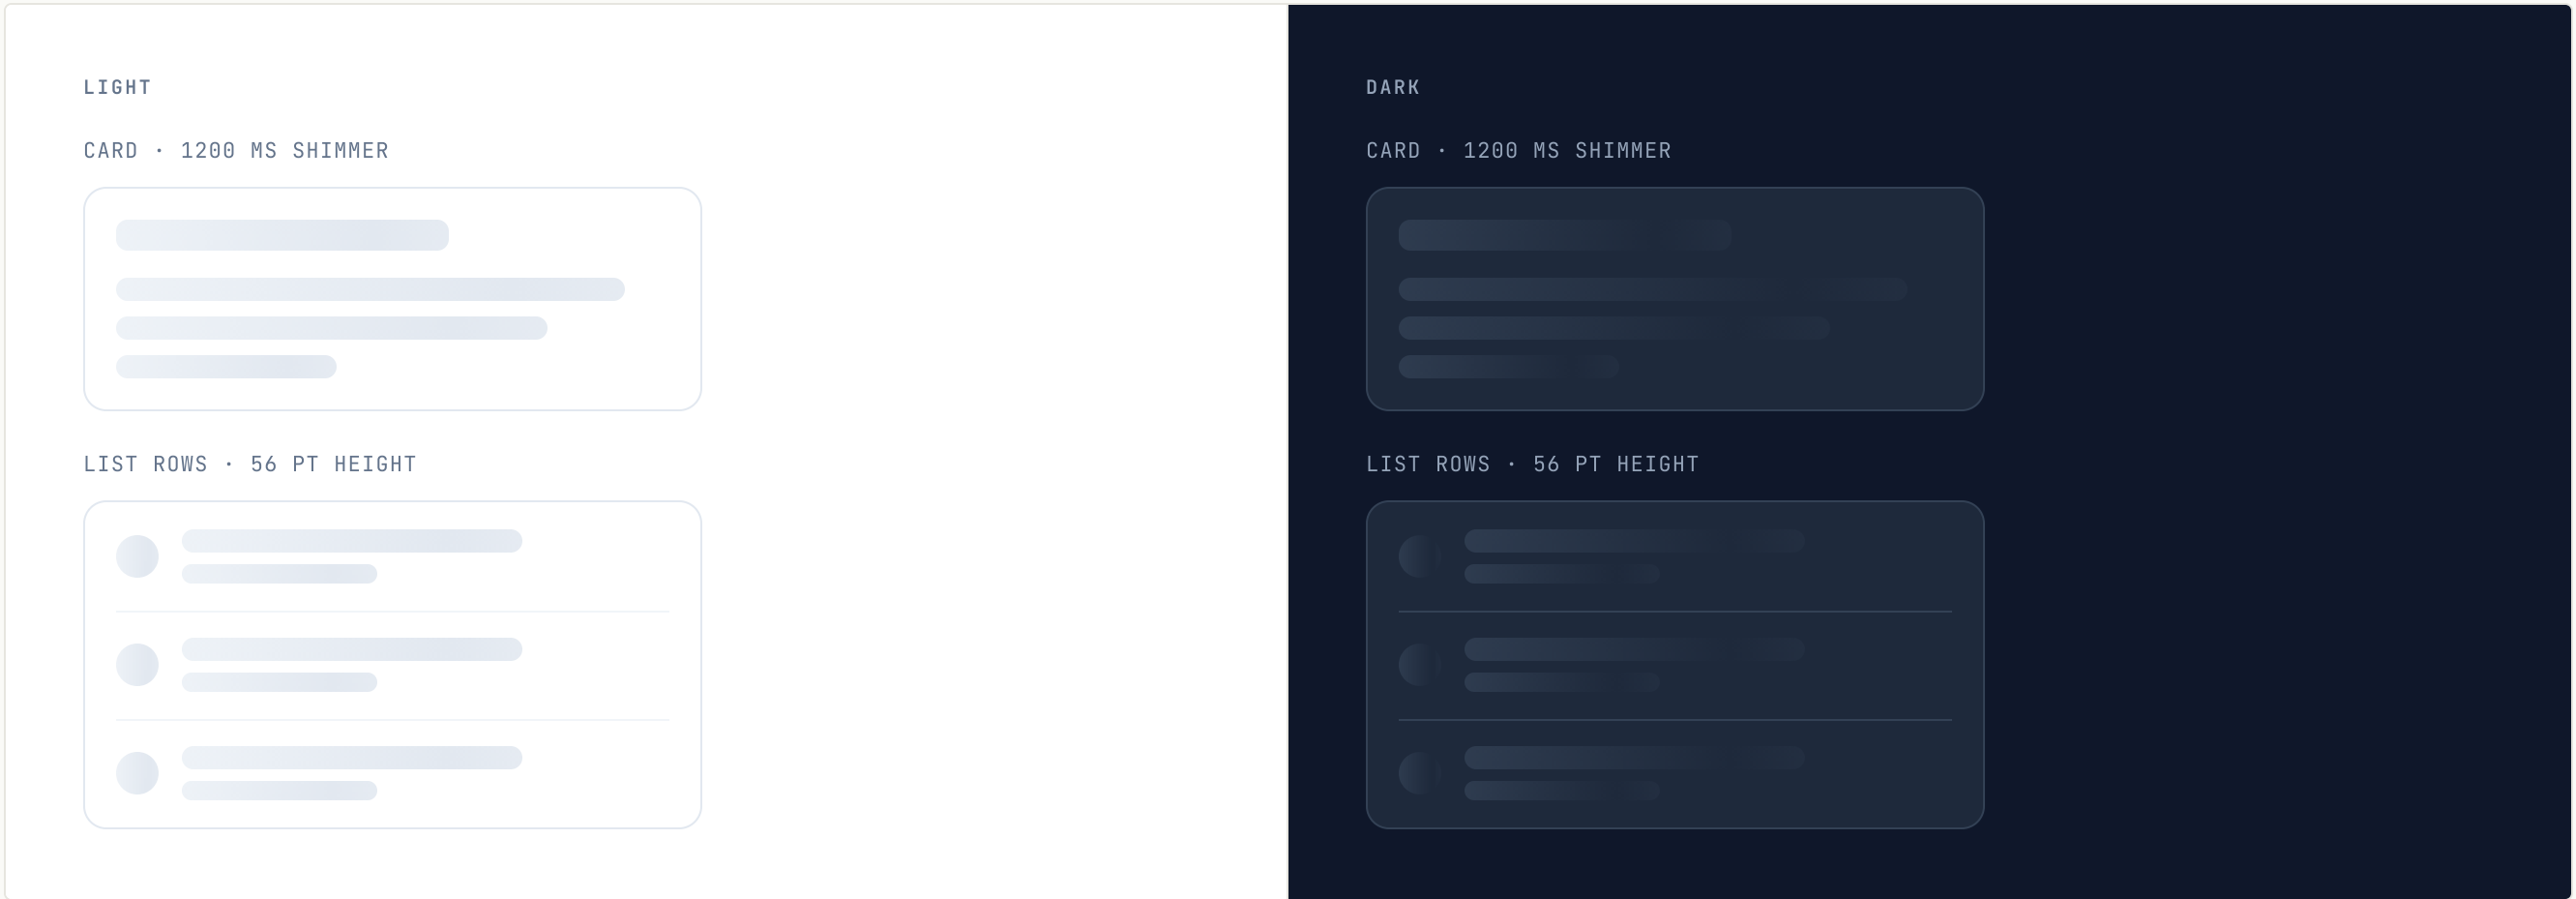

Half-sheet (50 vh) for quick actions and item edits — drag indicator only, dismiss by swipe or backdrop tap. Full-sheet (90 vh) for heavier flows like add-product and OCR review — adds a leading X close button and a sticky CTA above the safe area. Both share a 16 pt top radius and a 24 pt overlay (black 40%).

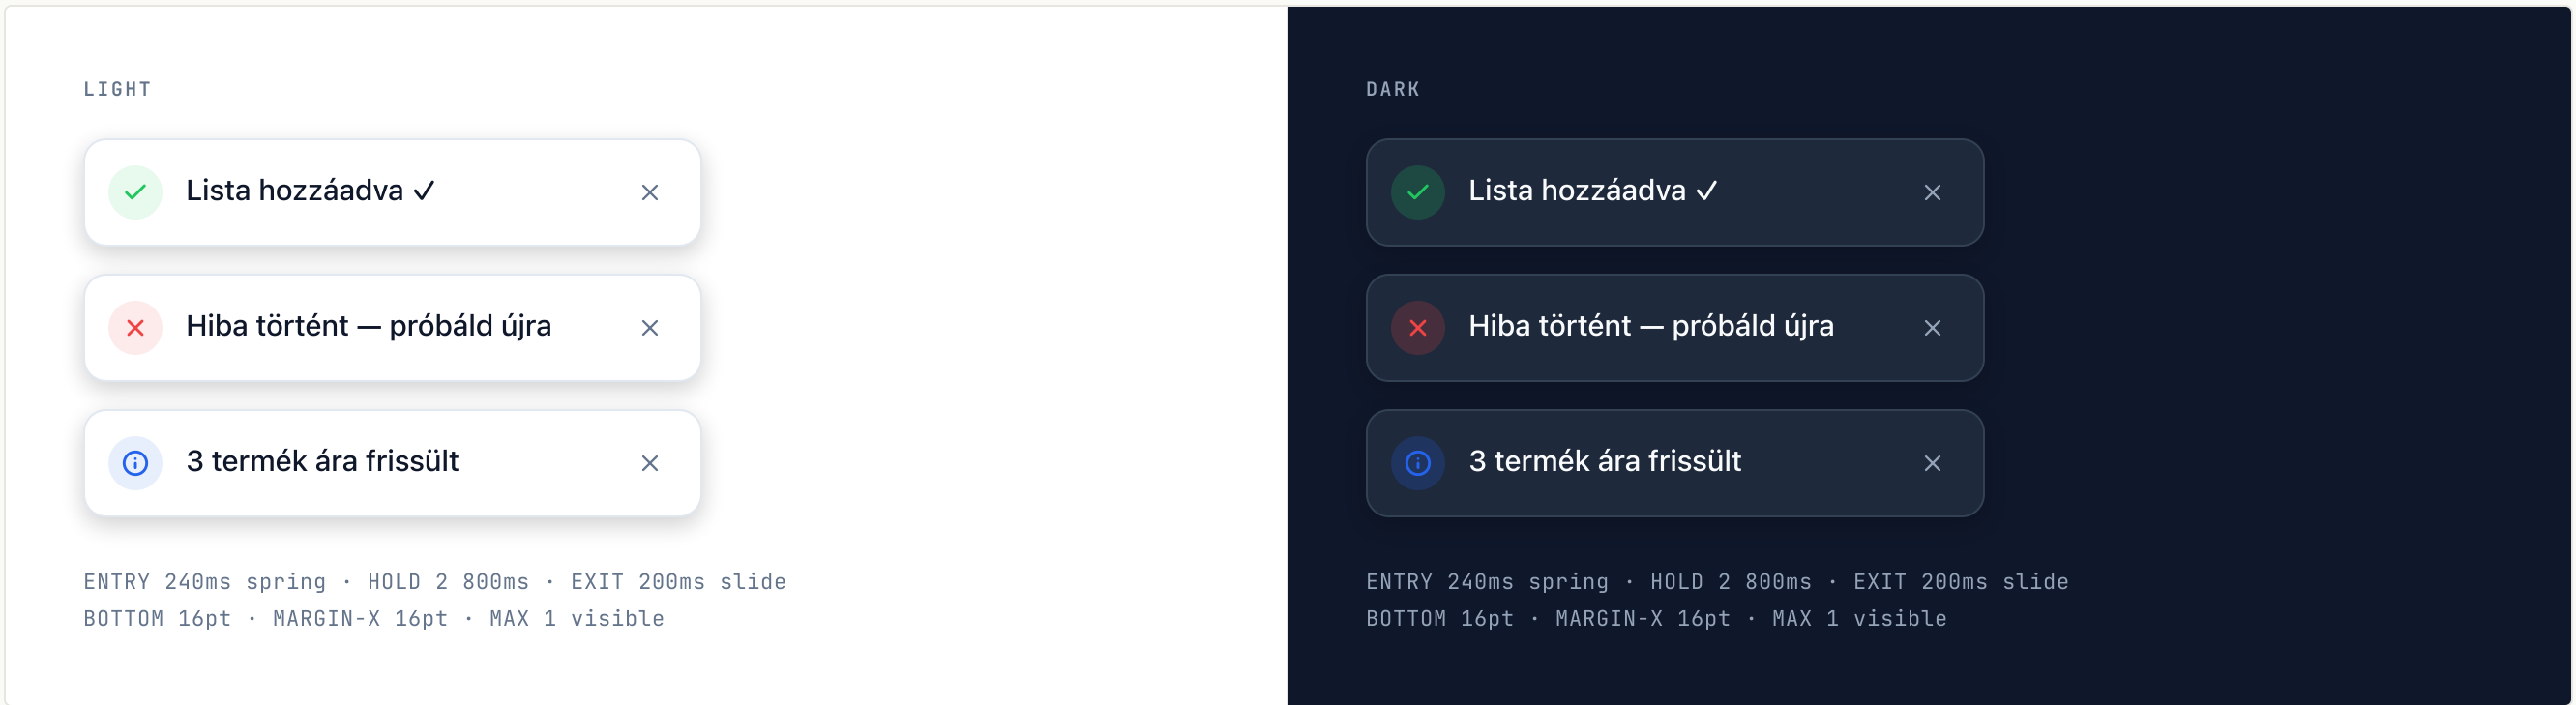

Centered stack: 48 pt muted icon, heading-md title, body-md description (max 2 lines), large primary CTA. Empty isn't a dead end — every variant ships with a recovery action. Copy stays warm and short ("Még nincs listád" not "0 results found").

Skeletons mirror the geometry of the content they replace — same radius, same row height, same column count. A 1200 ms left→right shimmer pass at 35% opacity provides liveness without distraction. Never show a skeleton for less than 200 ms; if data lands faster, skip straight to the rendered state.

A single toast at a time, 16 pt from the bottom safe area, full width minus 16 pt margins. Spring entry (240 ms, damping 0.78), 2800 ms hold, 200 ms slide-out. Colored 4 pt left border keys the variant; dismiss-X always present for power users. Stacking is forbidden — newer toasts replace older ones with a 120 ms cross-fade.

DO - Use one primary button per screen — it's the lighthouse. - Pair Toast + Skeleton: skeleton during load → toast on success / error. - Use category Badges as the only color in monochrome lists. - Honor 44 pt min tap target — even when visual is smaller (checkbox). - Bolt-mode checkboxes ship medium haptic on tap. Always.	DON'T - Stack toasts — the second one replaces the first via cross-fade. - Mix ghost + secondary in the same row — pick one. - Use destructive variant for "Cancel" — it's reserved for delete/remove only. - Float labels inside inputs. Always above. Hungarian compounds get long. - Show a skeleton for less than 200 ms — it'll flicker.
